Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequestedsanger.ac.uk
On Nov 27, 2000 this sequence version replaced gi:10198636.
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Bm:, SMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORNPEP; Information the their/Www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 20, constructed by the Sanger Centre Chromosome 20 mapping group. Purther information can be found at http://www.sanger.ac.uk/HGP/Chtz0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RPI-177H20 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.
The true right end of clone RPI-172H20 is at 9947 in this sequence. The true left end of clone RPI-3012 is at 28594 in this sequence. The true right end of clone RPI-21D12 is at 100 in this sequence. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred

note="Charlie2 repeat: matches 3534. .3727 of consensus"
                problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. RPI-172H20 is from the library RPC-1 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             note="L1MB1 repeat: matches 5696. .6172 of consensus"
